Nov 30, 2017

1. **Update**

   For the past two weeks,

   a. We closely studied the model building part of "Pivot" paper.

   b. We worked on building adversarial model with RecNN.

   c. We updated code to handle seq-reversed data.

   d. We also used RecNN to run experiments with sequential dataset.

   e. And tried and ran Gated RecNN, but encountered bugs.

2. **Next Step**

   We are looking to try and run our new model and compare the performance with previous experiment results.
